WIRELESS AUDIT

Aim:

To perform wireless audit on Access Point and decrypt WPA keys using aircrack-ng tool in Kalilinux OS.

Algorithm:

- 1. Check the current wireless interface with iwconfig command.
- 2. Get the channel number, MAC address and ESSID with iwlist command.
- 3. Start the wireless interface in monitor mode on specific AP channel with airmon-ng.
- 4. If processes are interfering with airmon-ng then kill those process.
- 5. Again start the wireless interface in monitor mode on specific AP channel with airmon-ng.
- 6. Start airodump-ng to capture Initialization Vectors(IVs).
- 7. Capture IVs for at least 5 to 10 minutes and then press Ctrl + C to stop the operation.
- 8. List the files to see the captured files
- 9. Run aircrack-ng to crack key using the IVs collected and using the dictionary file rockyou.txt
- 10. If the passphrase is found in dictionary then Key Found message displayed; else print Key Not Found.

Output:

root@kali:~# iwconfig eth0

no wireless extensions.

wlan0 IEEE 802.11bgn ESSID:off/any

Mode:Managed Access Point: Not-Associated Tx-Power=20 dBm
